Youth And The War

PUBLIC AFFECTION has frequently been drawn to the important part played by youth in the present war. The lightning pace of modern warfare appears to demand the strength and alertness of young men, and they are responding splendidly to the demands which are made on them at this time. Precedent has been broken many times recently by the appointment of men under twenty-five to posts as high ranking officers, and Canada and all the United Nations have already honored veterans and heroes of this war who are only twenty or twenty-one years of age. Youthful men who took part in the Battle of Britain turned the course of the war in 1940, and they have fought ever since for the air supremacy which has made possible the present great Allied offensive. Many of our young soldiers, seamen, and airmen have lost their lives, others are disabled for life, and some are spending the long months of the war in enemy prison camps. They are giving their service with a bravery and determination which would in normal times be considered beyond their years and they deserve credit and honor for their deeds.

Free Education For Army Men

There is full realization here of the contribution which the young men of Canada are making towards the winning of the war, and our post-war reconstruction plans include provision for returned service men to complete their interrupted educations or to receive special vocational training. At present much is being done to provide facilities for those in the services to improve their educations and there is also provision for young men in the army between the ages of seventeen and twenty-two to enter courses in mathematics, physics and engineering. Eleven Canadian universities are participating in this plan, under which free tuition, board and room, text books and medical care are provided. Students benefiting by it must have the required qualifications for entering a university, they must take military training. On completing their studies they are immediately eligible for officer training. There is also provision that should their courses be interrupted at this time, full credit for the work they have done will be given to them after the war.

Advantages Of Plan Are Many

It is believed that while there are many who will be unable to take advantage of this opportunity because of the standard of education required and the age limits, there are a number of young men in the Canadian army who will benefit by it. The advantage of the arrangement to those who are able to take part in it will be many. It is well known that in the past, and especially during the depression period, many young men of ability were prevented from securing a university education because of the lack of necessary funds. The generous terms of this new plan will give the students a splendid opportunity to pursue their studies free of financial worries, and it will give them a foundation on which to re-establish themselves after the war. It is felt that this plan is just the beginning of an effort to help the young men of the fighting services with tangible evidence that their worth to their country is fully realized and appreciated.

HEALTH LEAGUE OF CANADA

CHEESE AS A MEAT SUBSTITUTE
These days you should use more cheese to replace the meat in your menus as it is a concentrated food, highly nutritious and stores well. On the market you will find Canadian cheddar cheese, sometimes called Canadian cheddar, processed cheddar and those ripened by mold and bacteria. Today we will consider the cheddar cheese only as it is the least expensive and used most in cheese cooking. It is available in many grades, old, depending on what flavor you desire. The nutritive value is the same for each, the cost increases with the age of the cheese due to the cost of storage.

Like milk, cheese is an almost perfect food furnishing protein in an efficient form, important building materials, calcium and phosphorus, vitamin A and the vitamin B complex. It also has a high fat content thus giving it a high energy value, one inch cube of cheddar cheese gives 100 calories.

When you are using the cheese just as a flavour or appetizer you should use the old cheddar as it has the strongest flavor. In your main dishes when you want the cheese to provide the energy and efficient protein you will need large amounts of the cheese and so you will find the new cheese most economical.

Cheese is easily and completely digested if properly cooked or combined with other food as a concentrated food high in fat and protein so it should be grated or used in combination with high carbohydrate foods. Cheese is slowly digested because of this high fat content and as a result is often erroneously believed to be indigestible. When cooking cheese you should be careful not to overcook it as it becomes tough and rubbery and as a result is hard to digest. When properly cooked it has a spongy texture.

Store your cheese in a cool place and cover to prevent loss of moisture. Try this recipe on a day when you are not serving meat.

- COHN AND CHEESE CASSEROLE**
- 1 cup canned corn
 - 1 cup bread or cracker crumbs
 - 1 cup grated cheese
 - 1/2 teaspoon salt
 - 2 cups folded milk
 - 1 tablespoon melted fat
 - 1 teaspoon Worcestershire sauce
 - 1/2 cup chopped green pepper (optional)
 - 2 eggs

Combine all ingredients except eggs and milk. Beat egg yolks and add with milk. Fold in stiffly beaten egg whites. Place in a greased baking dish and over-put in a moderate oven (350 degrees F.) until set—about 40 minutes. Serves 4 to 6.

For further cheese dishes write to the Western Division Health League of Canada, 111 Avenue Road, Toronto, Ontario.

COWBOYS USE PLANES

There is a new twist to the old western rumpus—sky cowboys. Air-planes are being used to round up wild horses in a campaign supervised by the United States grazing service to rid southwestern Wyoming sheep and cattle ranges of the mustangs.

It is estimated that Canada will need 477,000,000 bushels of oats to meet export and domestic demand in 1945-46.

Soil Composition

Important Work Accomplished By Agricultural Chemists

To the casual passer-by the soil of any farm may appear uniform but under the careful investigation of the soil scientists startling differences may soon become apparent. There may be mineral deficiencies, some soils may be more efficient for growing certain crops than others, and again some soils may be of little use to the farmer unless they are treated with the proper amount of the elements of the fertilizer. One of the aims of the agricultural scientist is to make the most efficient use of the soil by determining the treatments necessary to get the most production.

Most Canadian soils require large amounts of phosphoric acid, and where this is added in the form of super-phosphate much of it becomes tied up in such a way that plants cannot use it. This is called phosphate fixation. The study of how to improve the utilization of the phosphoric acid of superphosphates has been one phase of the work of paramount importance to Canadian agriculture carried out by the Chemistry Department of Agriculture. Under present war conditions, the study is of special importance, because the supply of superphosphates is limited chiefly on account of the restricted amount of sulphuric acid necessary in its manufacture.

An investigation on the sources of phosphoric acid as a fertilizer is also another of the main objects of the Division. Basic slag (a by-product in the manufacture of steel) has received particular attention. Chemical tests have indicated that, as a result of the change in the composition of the slag, much more of the phosphoric acid of the slag becomes available, and the Division is now undertaking studies to determine the fertilizer value of this modified product. In view of the fact that the annual production of slag at Sydney, N.S., is expected to be about 125,000 tons, and also that there is a need for larger quantities of phosphate fertilizers in Canada, the employment of the open hearth slag would be an important aid to increased production. If it can be shown that it is a useful source of phosphorus for plants.

In addition to studies in connection with soils and fertilizers, the work of the Division of Chemistry includes investigations on animal nutrition, plant chemistry and foods. Chemical analyses are also made for projects conducted by other Divisions of Service and the Experimental Farm Service and analyses are made in connection with the administration of the Meat and Canned Foods Act and the Maple Sugar Industry Act. The main laboratories of the Division are situated at the Central Experimental Farm, Ottawa, and regional laboratories are maintained at the Dominion Experimental Stations at Kentville, N.S., and Summerland, B.C.

American Bases

Reported British Government Will Compensate Private Owners

The U.S. State Department has announced that the British government has offered to assume the cost of compensating owners of private property involved in the establishment of American bases on western hemisphere sites acquired from Britain in the destroyers-for-bases deal of September, 1940.

In the original agreement, providing for the transfer of 50 destroyers to Britain in return for 99-year leases on bases in Newfoundland, Bermuda, the Bahamas, Jamaica, Antigua, St. Lucia, Trinidad and Barbados, the United States undertook to compensate owners of private property for loss.

In taking over the cost of compensating private owners, the British government assumes the burden of paying for properties appraised at approximately \$5,500,000.

ALWAYS
Specific BURGESS BATTERIES

Friedman told Detective Sgt. Bonner that he was walking along St. Lawrence near St. Catherine street in the central section of Montreal late on the night of July 27, when he felt something strike him on the head. The resulting bruise over his eyes did not respond to home treatment and eventually became painful. Friedman went to see Dr. Benjamin Kolber who discovered and removed the bullet.

Naval Board

Acting Paymaster Commander Joseph Jeffery, R.C.N.V.R., of London, Ont., has been appointed secretary of the Naval Board. Commander Jeffery succeeds Captain R. A. Pennington, R.C.N.V.R., who has been assigned to duties with the Royal Canadian Navy in London, Eng.

New Anson Bombers

Owes Many Improvements To Canadian Aircraft Engineers
There is plenty of skill and inventive ingenuity in Canada's aircraft industry.

Canada's new Anson bombers, the basically English bomber-trainer which has been re-designed for typically Canadian jobs and conditions, owes most of its changes and improvements to Canadian aircraft engineers.

An example is the windscreen on the new Anson V, designed by the engineering staff of the Canadian Car and Foundry engineering department at Amherst, N.S. The new windscreen is one of the new plane's major improvements according to aeronautical engineers.

After a Canadian Car engineer designed the screen last fall, it was sent to Montreal for the fitting of it to the plastic demonstration fuselage that was used at that time in planning studies of the new aircraft. The first model was made by hand in the Amherst plant with George Henderson supervising the jig and basic structure and Cecil Biles in charge of assembling.

The new screen is so simple to manufacture that the time saving over the old screen has been estimated at 75 per cent.

Scientific Studies

Clearing House For Information To Be Established

A committee of scientists, representing the English-speaking countries, to act as clearing house for information and reports, is expected to be named soon by the governments concerned. It was announced at Washington by Sir John Anderson, member of the British war cabinet, who is responsible for scientific warfare research in Britain.

In time, he said, other countries may be invited to make representations to the international committee and he expressed the hope it would continue its functions in the post-war period, uniting scientific studies and research efforts in peace as they are in war.

The idea of the committee was advanced by the Royal Society in London and the British government has passed along the suggestion to the governments concerned.

Sir John, who will go from Washington to Ottawa, came to North America to further scientific collaboration and research in the United States and Canada. He said remarkable studies have been made in this direction and with Russia as well.

Found The Trouble

Had A Bullet In His Head And Didn't Know

Abraham Friedman, 48, of Montreal, went to see a doctor after an injury sustained almost three weeks before had failed to heal—and had a 22 calibre bullet removed from his forehead.

Friedman told Detective Sgt. Bonner that he was walking along St. Lawrence near St. Catherine street in the central section of Montreal late on the night of July 27, when he felt something strike him on the head. The resulting bruise over his eyes did not respond to home treatment and eventually became painful. Friedman went to see Dr. Benjamin Kolber who discovered and removed the bullet.

In Ottawa, the Parliamentary Library has grown until it is ready to burst its seams, and for want of room research is hindered. Books and documents which should be quickly available have to be sought for behind the others.

The joint committee of the library of Parliament does well therefore to recommend the establishment of a new library, one of the 350,000 volumes now existing. It should be an institution worthy of Canada, her past achievements, her present status and her future greatness.

As patriots, our Parliament should have no hesitation in proceeding with the project, a noble commensurate with our national aspirations and our visions of the future—Hamilton Spectator.

GEMS OF THOUGHT

SILENCE: ITS VIRTUE

Silence never shows itself to so great an advantage as when it is made the reply to calumny and defamation.—Addison.

There is an eloquent silence; it serves sometimes to approve, sometimes to disapprove; there is a respectful silence.—La Rochefoucauld.

Silence is the safest respondent for all the contradiction that arises from impetuosity, vulgarity, or envy.—Zimmerman.

No reproach is so potent as the silent lesson of a good example.—Mary Baker Eddy.

Silence is the element in which great things fashion themselves together; that at length they may emerge, full-formed and majestic, into the delights of life, which they are henceforth to rule.—Caryle.

He knows not how to speak who cannot be silent; still less how to act with vigor and decision. Who harkens to the end is silent; loudness is impotence.—Lavater.

GROW ON YIELD

every morning at 8.30 o'clock. They seem to be installed at strategic points in Ottawa and Hull, and are the wettest sound of a long day. As the morning but penetrating noise rises and falls, thousands do the last leg to work in a staggered day.

Unofficially it is estimated that about 20,000 people are in Ottawa doing temporary work in connection with the war. Looks it on the street and in the eating places. Housing has been a big problem. Maybe you don't know it out there but the government built a place, called Laurier House, especially for Grade 1 girls office

workers which takes care of about 300. It is nicely and very comfortably furnished, and the girls pay \$8.50 weekly, which includes meals. Helps some.

Behind the scenes plans seem to be laid for repatriation of service men. For instance, Repatriation Department No. 1 was recently opened at Rockfield R.C.M.P. Station near Ottawa where men are taken care of from the time they land in Canada by ship until another place is found for them in the services or to their return to civilian life as the case may be.

Mrs. and Mrs. DePorter of Portland, Ore. arrived in town last week to visit Mrs. DePorter's parents Mr. and Mrs. W. Cook. They will visit other relatives in Alberta before returning to the States.

Mrs. John Bop of Calgary was a guest at the home of Mrs. Walter last Sunday.

Thomas Weber of Milo has joined the R.C.A.F. as an aero engine mechanic. He will report for duty on September 2.

Jack Lester who is with the army in Medicine Hat, helping keep an eye on a bunch of Nazi prisoners of war returned to his duties over the week end. He spent a couple of weeks in town holidaying and a lot of the time was spent on the banks of the Bow river trying to land some of the funny birds. He did land one that we know of for certain.

The shooting season opens next month, the 19th to be exact. With the shortage of ammunition that is definitely known to exist the unlucky, open day number five in line.

Soldiers detailed from army training to help with the war effort are paid at \$4 a day in Western Canada, \$3.50 in most parts of Ontario, \$3 in Quebec and the Maritimes, farmers also providing room and board according to National Defence Force. Where they are granted compassion allow leave to work on their own farms, the farms of near relatives, soldiers get free transportation up to \$500 miles.

A significant item! The number of male teachers in eight provinces, excluding Quebec, declined from 14,700 in 1939 to 12,600 in 1942, due to enlistments and the fact that higher salaried employment was found elsewhere about 80 percent of this loss was from one-room rural schools, where the teachers were younger and

more numerous.
